Subject: Re: Another Late & Fraudulent FOIL Response RE: Bethpage Update

Dear All:

This looks like a class action suit should be brought about or a civil action.

There has been a cover up by government offices .Perhaps I should file a U.S. Attorney Complaint with Southern District Office Preet Bhara and the Eastern District Office also and tell all. As well as attach all these documents, emails and prior articles I have. Then follow up with the civil and class action lawsuit.

I spoke to a larger law firm this past week and we shall speak again next week on other possible lawsuit and perhaps they will take this one also.

I shall contact them and inform them of this situation. We shall be setting up an appointment to meet and I will bring all documents shortly. I can bring these documents also if they are interested.

Happy New Year to all.

Regards,

Rose Van Guilder

Dear Ms. Weiner: Thank you for the email update below. It arrived a few hours after another incomplete response by the NYSDOH to my September 27, 2015 FOIL below. But it did include a "Smoking Gun": the May 1995 report entitled **"NEW YORK STATE SITE REGISTRY DELISTING PETITION HEADQUARTERS COMPLEX BETHPAGE, NEW YORK"**; submitted 6 months after I retired by Dvirka & Bartilucci on behalf of Grumman Aerospace Corp. to:

- **Langdon Marsh, Commissioner New York State Department of Environmental Conservation 50 Wolf Road Albany, NY 12233-7010.**

Similar delisting reports for the Navy's Bethpage & Calverton CERCLA sites must also exist, but the NYSDOH seems to have misplaced them. To help show the 1995 report is a fraud, I uploaded it and the Plant-26 report to www.gfxtechnology.com/DLR-95.pdf & www.gfxtechnology.com/Plant-26.pdf, respectively.

- Please forward these links to the 1,000 residents that approached your firm because many of them, including Cablevision employees, can use these reports to file Workers' Comp claims.

These 2 reports indicate the NAVY, NYSDEC, Grumman Aerospace, Northrop-Grumman, Dvirka & Bartilucci and others conspired to conceal information that would have prevented the sale and/or leasing Bethpage sites that Lisa Jackson should have declared Federal Superfund sites pursuant to the 2012 Petition filed pursuant to CERCLA Section 105(d) by:

- Ethan D. Irwin, Esq. 12 Green Lane Levittown, NY 11756 (631)948-0753
- Sandra D'Arcangelo, 3830 Hahn Avenue, Bethpage, NY 11714 (516)735-4170
- Rosemary Styne, 15 Shubert Lane, Bethpage, NY 11714 (516)731-5830

One example of corruption, waste, fraud & abuse within the jurisdiction of EPA Administrator Judith Enck

The 12/28/15 NYSDOH letter in the attachment alleges:

- ***"Please note that the radioactive materials license was terminated many years ago and those records are no longer maintained by the Department."*** But this allegation is contradicted by the following section from the Plant 26 report:
- ***This area was formerly used for "radiation effects studies" in which various types of metals were tested with different types of radiation (alpha, beta, and gamma). The radiological research that was conducted in this part of Plant 26 was conducted with authorization from the New York State Department of Labor***

(NYSDOL) license number 733-0291. This area, and other radiation laboratory areas of Plant 26 underwent a decommissioning in December 1998 and January 1999, as described in Section 3.3 of this report.(from pg. 3 of "**Phase I Environmental Site Assessment Plant 26 Northrop Grumman Facility Bethpage, New York**", February 2000, by ARCADIS Geraghty & Miller, Inc. 88 Duryea Road Melville New York 11747 for Northrop Grumman Corporation South Oyster Bay Road Bethpage, New York 11714)

Without corrupt engineering reports rubber-stamped by corrupt DEC, EPA & DOH officials, neither Grumman nor the NAVY could have sold contaminated sites for millions of dollars unless the Radium-plumes missed by Dvirka & Bartilucci had been removed.

I hope you can use the attached report in your lawsuit.

Happy New Year

Carmine

Carmine,

I received your voicemail regarding the Bethpage lawsuit. It has not been filed yet – we are still actively working on the case and have been approached by over 1,000 residents from the town. We will update everyone via e-mail once the complaint is filed.

Thank you,

Attorneys at Law

Subject: Radiation Decommissioning Reports for Grumman

Date: Sun, 27 Sep 2015 14:15:12 -0400

To whom it may concern: Please provide copies of the following reports, and related site reports covering classified programs in Calverton, Great River & Calverton like those I worked on before retiring from Grumman in 1994:

1. "New York State Site Registry Delisting Petition, Headquarters Complex, Bethpage, New York, Grumman Aerospace Corporation" dated March 1995.
2. A copy of the final decommissioning report submitted to the NYSDOL Division of Safety and Health; cited in Section 3.3 Previous Environmental Investigations of the Phase I Environmental Site Assessment Plant 26 Northrop Grumman Facility Bethpage, New York, which I uploaded to <http://www.gfxtechnology.com/Plant-26.pdf>.

Please also provide a copy of the NRC or DOE license[s] to the NYSDOL Division of Safety and Health allowing them to decontaminate radioactive DOD sites discussed in section 3.3 as follows:

- ***Previous environmental investigations have also been conducted at Plant 14 and Plant 31, which adjoin the Plant 26 property to the west and east, respectively. The investigations are summarized in the March 1995 Dvirka and Bartilucci report previously referenced. The March 1995 delisting report was submitted to the NYSDEC. In June of 1995 the NYSDEC delisted Plant 26 (as well as Plants 14, 31 and III) from its Registry of Inactive Hazardous Waste Sites. A copy of the NYSDEC delisting approval letter is provided in Appendix B. In January 1999, the areas of Plant 26 which formerly contained the Van de Graff (VDG) ion generator and Kaman neutron generator, as well as other laboratory rooms used for radiological research were decommissioned. The decommissioning was performed by CoPhysics Corporation in conjunction with Northrop Grumman radiation safety personnel. Prior to the decommissioning, a written plan was prepared and submitted to the New York State Department of Labor (NYSDOL), which was the agency that licensed the VDG radiation facility. The NYSDOL approved the decommissioning plan on December 3, 1998, and the decommissioning occurred during December 1998 and January 1999. The following areas of Plant 26 were decommissioned: the VDG accelerator facility area including the control room, accelerator room, target room, basement, rooms 108, 107c, 107a and b, 104, 105, 106, corridors, and 50 feet of underground duct work. As part of the decommissioning, all floors, walls, ceilings, equipment, and supporting fixtures in the VDG facility and adjoining laboratories were decontaminated and surveyed. The results of the post decontamination survey revealed that average residual radioactivity levels were less than ten percent of the applicable New York***

State guidelines and were indistinguishable from background levels. A final decommissioning report was submitted to the NYSDOL Division of Safety and Health. On March 15, 1999 the NYSDOL Division of Safety and Health issued a letter to Northrop Grumman stating that the decommissioning activities were acceptable and released Plant 26 from radiological control. A copy of the approval and release letter is provided in Appendix F.

Yours truly,

Dr. Carmine F. Vasile
